What should the users of the enmacc platform know about your company?

We design the grid of the future and transmit energy across state and national borders. Founded in 1998, TransnetBW GmbH not only operates the electricity transmission grid in Baden-Württemberg but also acts as a professional trader on various energy markets. Our clients and partners include electricity traders, power plant and distribution system operators in Germany and abroad. In particular, we procure long-term electricity via tenders to cover our grid losses.

Are you interested in getting to know new counterparties?

We are regularly creating tenders on enmacc and actively looking for new trading partners to comply with the Energiewirtschaftsgesetz (EnWG) and the Netzzugangsverordnung Strom regulations to compensate for grid losses. To participate we have a German general agreement.

Further information on the procurement of the long-term component of our grid losses can be found on
